Configuring Zopier on a Computer

Zoiper is an open-source portable SIP softphone. It allows you to do high-quality VoIP calls via open SIP protocol.

1. Download **Zoiper** to your computer and open the app after installing it.
2. Insert **username** and **password** and then click on **login**. Your username will be your number followed by **@plus.sipcity.com**.
Example: **15084568090@plus.sipcity.com**.
The password is your number's password as set by you.

3. You'll need to insert the hostname provider which is **plus.sipcity.com** then click **next**.

4. In “Authentication and Outbound proxy” you can click on **skip**.
5. When the possible configurations come up, please choose whichever type of transport it is found and then click **Next**.

The screenshot shows a window titled "Zoiper5" with a sidebar on the left and a main content area on the right. The sidebar contains a checkbox labeled "Optional Authentication and Outbound proxy". Below this are two input fields: "Authentication username" and "Outbound proxy". At the bottom of the sidebar are two buttons: "Back" and "Skip". The "Skip" button is highlighted with a red rectangular border. The main content area features a background image of a laptop and a mouse with a white padlock icon overlaid. Text in the main area includes "Authentication username", "Not sure if you need this? Ask your VoIP provider or system administrator about the requirements for your office PBX.", "Outbound proxy", and "This is typically not required. However, in some special environments it is needed for network access."

After this, the registration process is complete, and you should be able to see your phone registered now.
