PIN Code

Santiago Garcia - 2025-06-04 - Outbound

PIN Code

To prevent unauthorized outbound calls from being placed for overseas or expensive overseas destinations, you can add an **Authorization PIN Code** to your number. With a PIN code in place, only those who know this can make outbound calls to the destinations constrained by your seeings.

This PIN code **must** be dialed **before** the call is placed. It's simple to set up.

How to set up a PIN code to prevent expensive calls from your phone:

1. Select **Switchboard >** Select number requiring a PIN code.

2. Select **Outbound** > **PIN Code**.

3. Select the **Call Type** which requires the PIN code. The call types available for you to use are: All calls, Toll-Free only, International calls only, and Expensive International calls only.

4. Enter your **four (4) digit PIN Code**.

5. Click **Save** to update settings.
